Contributions should, preferably, be sent to a member of the Advisory Editorial Board (addresses are given in the first issue of each volume) who is familiar with the research reported, or to one of the Editors:

A.D. BUCKINGHAM
D.A. KING
Editor of Chemical Physics Letters
University Chemical Laboratory
Lensfield Road
Cambridge CB2 1EW, UK
FAX 44-1223-336362

A.H. ZEWAİL
Editor of Chemical Physics Letters
A.A. Noyes Laboratory of Chemical Physics
California Institute of Technology
Mail Code 127-72
Pasadena, CA 91125, USA
FAX 1-818-4050454

After acceptance of the paper for publication, all further correspondence should be sent to the publishers (Ms. S.A. Hallink, Editorial Department, Chemistry & Chemical Engineering Department, P.O. Box 330, 1000 AH Amsterdam, The Netherlands; telephone 31-20-4852664, FAX 31-20-4852775, telex 10704 espom nl; electronic mail X400: C=NL; A=400NET; P=SURF; O=ELSEVIER; S=HALLINK, I=S or RFC822: S.HALLINK@ELSEVIER.NL).

Chemical Physics Letters (ISSN 0009-2614). For 1996, volumes 246-263 are scheduled for publication. Subscription prices are available upon request from the publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, PR China, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available upon request. Claims for missing issues must be made within six months of our publication (mailing) date. Please address all your requests regarding orders and subscription queries to: Elsevier Science B.V., Journal Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Tel.: 31-20-4853642, fax: 31-20-4853598.

US mailing notice - Chemical Physics Letters (ISSN 0009-2614) is published weekly by Elsevier Science B.V., Molenwerf 1, P.O. Box 211, 1000 AE Amsterdam. Annual subscription price in the USA US\$ 6915.00, including air speed delivery, valid in North, Central and South America only. Second class postage paid at Jamaica, NY 11431. USA POSTMASTERS: Send address changes to Chemical Physics Letters, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Airfreight and mailing in the USA by Publication Expediting.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of the publisher, Elsevier Science B.V., Copyright and Permissions Department, P.O. Box 521, 1000 AM Amsterdam, The Netherlands.

Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. The fee indicated on the first page of an article in this issue will apply retroactively to all articles published in the journal, regardless of the year of publication. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

∞ The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper).

Signal Treatment and Signal Analysis in NMR

Edited by D.N. Rutledge

Data Handling in Science and Technology Volume 18

Contents: General Theory of Signal Analysis in NMR.

1. Fourier transforms and signal manipulation (L.J. Eveleigh).
2. Maximum entropy methods in NMR data processing (K.M. Wright).
3. Analysis of NMR relaxation data (K.P. Whittall).
4. Nonlinear regression (R.S. Cármenes).
5. The Padé-Laplace analysis of NMR signals (J. Aubard, P. Lavoire).
6. Digital filtering (K.J. Cross).
7. Binomial filters (E. Kupce).
8. Linear prediction-singular value decomposition in NMR signal analysis (M. Lupu, D. Todor).

Applications in the Time-Domain.

9. A windows program for relaxation parameter estimation (D.N. Rutledge).
10. Continuous relaxation time distribution decomposition by MEM (F. Mariette, J-P. Guillement, C. Tellier, P. Marchal).
11. Examples of the use of Padé-Laplace in NMR (D. Le Botlan).
12. Analysis and interpretation of NMR water relaxation and diffusion data (B.P. Hills).
13. Scattering wavevector analysis of pulsed gradient spin echo data (A. Coy, P.T. Callaghan).

Applications in the Frequency-Domain.

14. Accuracy and precision of intensity determinations in quantitative NMR (J.-P. Grivet).
15. Least squares estimation of parameters affecting lineshapes in multi-site chemical exchange (G. Crisponi).
16. Reference deconvolution in NMR (G.A. Morris).
17. Continuous wave and rapid scale correlation NMR (P.S. Belton).
18. Data processing in high-resolution multidimensional NMR (M.A. Delsuc).
19. Neural networks for 2D NMR spectroscopy (S.A. Corne).
20. Analysis of nuclear magnetic resonance spectra of mixtures using multivariate techniques (T. Brekke, O.M. Kvalheim).

Applications in the Spatial-Domain.

21. Quantitative magnetic resonance imaging: applications and estimation of errors (S.J. Doran).
22. Stochastic spectroscopic imaging (H. Nilgens, B. Blümich).
23. Applications of multivariate data analysis techniques to NMR imaging (H. Grahn, P. Galadi).

The currencies as stated with this information are definitive. **Dutch Guilder (Dfl.)** prices apply to customers **within Europe and Japan** only. **US dollar (\$)** prices apply to all customers residing **outside Europe and Japan**. Prices are subject to change without prior notice. If you are a resident of the European Union you should either state your Value Added Tax (VAT) number or add the relevant VAT percentage applicable in your country to the total amount.

Signal analysis and signal treatment are integral parts of all types of Nuclear Magnetic Resonance. In the last ten years, much has been achieved in the development of dimensional spectra. At the same time new NMR techniques such as NMR Imaging and multidimensional spectroscopy have appeared, requiring entirely new methods of signal analysis. Up until now, most NMR texts and reference books limited their presentation of signal processing to a short introduction to the principles of the Fourier Transform, signal convolution, apodisation and noise reduction. To understand the mathematics of the newer signal processing techniques, it was necessary to go back to the primary references in NMR, chemometrics and mathematics journals. The objective of this book is to fill this void.

Features of this book:

- Contributions from experts in the field.
- Presents both the theory and applications of most of these new techniques to Time-Domain, Frequency-Domain and Space-Domain NMR signals.
- Details are provided on many of the algorithms used and a companion CD-ROM is included which contains some of the computer programs, either as source code or in executable form.
- Aimed primarily at NMR users in the medical, industrial and academic fields, and of interest to chemometricians and programmers working with other techniques.

Progress in Optics Volume XXXIV

Edited by **E. Wolf**

©1995 442 pages Price: NLG 265.00 (US\$165.75) ISBN 0-444-82140-6

This volume presents a review of the research in several areas of modern optics written by experts well-known in the international scientific community. The first chapter discusses properties and methods of production and detection of coherent superpositions of macroscopically distinguishable states of light (the so-called Schrödinger cat states). Chapter two deals with the phase-shift method, which originated in the 1930's, for the analysis of potential-scattering problems in atomic and nuclear physics. Recently this approach has been applied to wave propagation in one-dimensional inhomogeneous media. Chapter three is concerned with the statistical properties of dynamic laser speckles that arise from scattering objects with rough surfaces undergoing translation and rotation. A moving phase-screen model is employed, which gives a relatively simple formulation of the theory and a clear picture of the time-varying speckle phenomenon. The fourth chapter presents a review of the more important theoretical and experimental results relating to optics of multilayer systems with randomly rough boundaries. The significant theoretical approaches which make it possible to interpret experimental data involving such systems are described, and relevant methods

for optical characterization of systems of this kind are outlined. The last chapter presents an account of a theory of the photon transport through turbid media.

Contents: Preface.

I. Quantum interference, superposition states of light, and nonclassical effects (V. Byzek, L. Knight).

II. Wave propagation in inhomogeneous media: phase-shift approach (L.P. Presnykavov).

III. The statistics of dynamic speckles (T. Okamoto, T. Asakura).

IV. Scattering of light from multilayer systems with rough boundaries (I. Ohlídal, K. Navrátil, M. Ohlídal).

V. Random walk and diffusion-like models of photon migration in turbid media (A.H. Gandjbakhche, G.H. Weiss).

Author index. Subject index. Cumulative index.
